

CONCRETE WORKS

...infinite possibilities!

cement design[®]

We live in a time where the world is constantly evolving. In a rush to catch the 'Trend Train', so often, quality suffocates the most! Whoever propagated that trendy is being weighed down by old-school methods, and is in effect losing its moment of shine, has clearly not had a rendezvous with us!

Design Quarry, incepted to challenge this notion, is proud to be rooted with traditional crafts, materials, and ideas while bringing something bespoke to the table. Every single time! Just like a quarry presents a unique stone in every excavation.

Other than producing spectacular handcrafted inlays and creating limitless possibilities of marble tiles, Design Quarry introduces **CONCRETE WORKS** to you here.

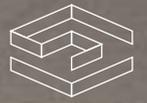

At Concrete Works, we use decorative concrete that is, basically, a coating of concrete capable of adapting to any surface. It can be executed on floors, walls, ceilings, bathrooms, terraces, facades, furniture, etc.; your visualization is our inspiration! It lends character to modern and minimalist spaces, at the same time, brings discreet sophistication with classic, rustic or antique finishes to existing property.

With a minimum thickness (1 to 2.5mm) and high adhesion, Concrete Works has the perfect decorative solution to avoid noisy works. We achieve continuous coatings with no joints and limitless extension. The product also ensures maximum functionality and aesthetic!

Owing to its character and technical advantages, it is a great alternative for renovations too. This is a product trending across the world right now; however, it comes with an assured longevity without a hidden asterisk!

We love to add new products and designs to our wide portfolio. Continuous research and development is the highlight at The Concrete Works. Working with the best of architects and interior designers across the country allows us to expand our thinking and creativity; they pose questions and our Creative Lab answers them!

Let us together bring forth the magic of ingenuity!

For any surface that needs to be covered, renovated or created from zero, Concrete Works' Versatile Series imparts an extremely sophisticated effect with great architectural value through cement based finishes. Our Versatile Series comprises of TURMALINA and KIT CONCRETE (Microtopping).

Though applied at reduced thickness of 2-2.5 mm, Turmalina and Kit Concrete adhere firmly to the underlying surface. Hence, they are perfect for private homes, businesses, showrooms or exterior areas, be it for pool side or restaurant, store or shopping center. They are equally perfect for coating vertical surfaces, such as plasterboard walls or masonry on stairs, in bathrooms, showers, and many more.

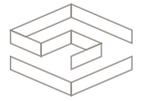

The possibilities of our Versatile Series are infinite!

APPLICATION

Microtopping coating is a seamless coating of an existing surface. The base material is concrete mortar in a powder form. The concrete is mixed on site with polymer and applied with a trowel across the surface. Four coats (Two Base Coats and Two Finish Coats) of concrete are applied over an appropriate base. To seal the porosity of concrete, it is finished with two layers of a PU based sealer. Various colours can be achieved by adding stainers to the mixture.

WARRANTY

There is a three-year warranty against cracking and fading, provided the base stays intact.

KIT CONCRETE (or Microtopping) is an upgrade of the traditional method of concrete coating, also known as IPS (Indian Patent System) or 'ghotai'.

IPS had 4 major issues –

1. It always developed cracks, immediately or in the near future
2. There needed to be break-joints to cater to the expansion and contraction of concrete
3. The layer needed to be atleast 50mm to get strength, which meant it is impossible to do in renovations and flats, which had multiple floors as it would add lot of weight to the structure
4. IPS needed to be cured for atleast 21 days before it is ready to use

All the above issues have been handled in Microtopping Concrete. It is a seamless application, without the need of any break joints. The polymer allows the concrete to expand and contract and hence doesn't crack. It is thin layer of 2mm, which binds firmly to the base available. It is a self curing material and is ready to use the next day! Microtopping is quick to install, imparts depth, light and harmony to any space!

Wall Series

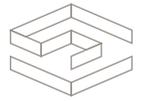

For any surface that needs to be covered, renovated or created from zero, Concrete Works' Wall Series imparts an extremely sophisticated effect with great architectural value through cement based finishes. Our Wall Series comprises of ECOCEMENT, POROCRET and RUSTIC.

Though applied at a negligible thickness of 1mm, EcoCement adheres firmly to the underlying surface. As the name suggests, the Wall Series is recommended only for vertical surfaces. Hence, it can be used on wardrobe shutters, ceilings, walls, etc. in private homes. showrooms, restaurants, shopping centers, and others.

Concrete Works' Wall Series can be personalized to suit a style or a particular colour scheme in addition to its trademark cloudy or water-like effect. The possibilities of our Wall Series are infinite

ECOCEMENT is a decorative application of concrete that creates a beautiful continuous surface.

Though natural concrete, it is a thin layer that saves further increasing the thickness of walls. With its infinite colour possibilities, it can be personalized to your own style. EcoCement is a cost effective yet impactful solution!

APPLICATION

EcoCement coating is a seamless coating of an existing surface. The base material is concrete mortar in a powder form. The concrete is mixed on site with polymer and applied with trowel across the surface. Three coats of concrete are applied over an appropriate base. To seal the porosity of concrete, it is finished with two layers of PU based sealer. Various colours can be achieved by adding stainers to the mixture.

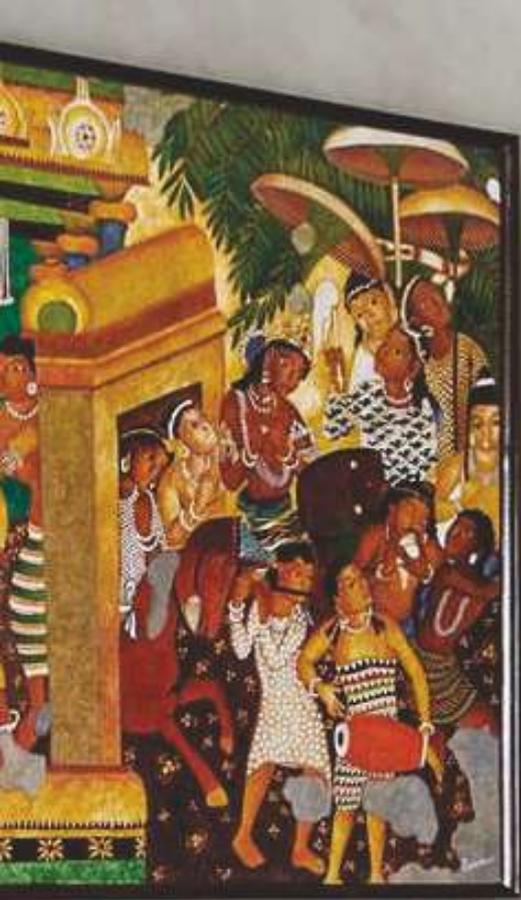

WARRANTY

There is a three-year warranty against cracking and fading, provided the base stays intact.

MicroTerrazzo

MICROTERRAZZO is all about going back to old-times with a touch of modernity!

Microterrazzo is seamless application in the thickness of 2mm and 4mm over an existing surface. Microterrazzo is a mix of concrete with stone chips or glass chips alongwith aggregates and polymers to give the effect of Mosaic Tiles/ Terrazzo flooring. It gives a modern twist to it by going seamless and not having any joins.

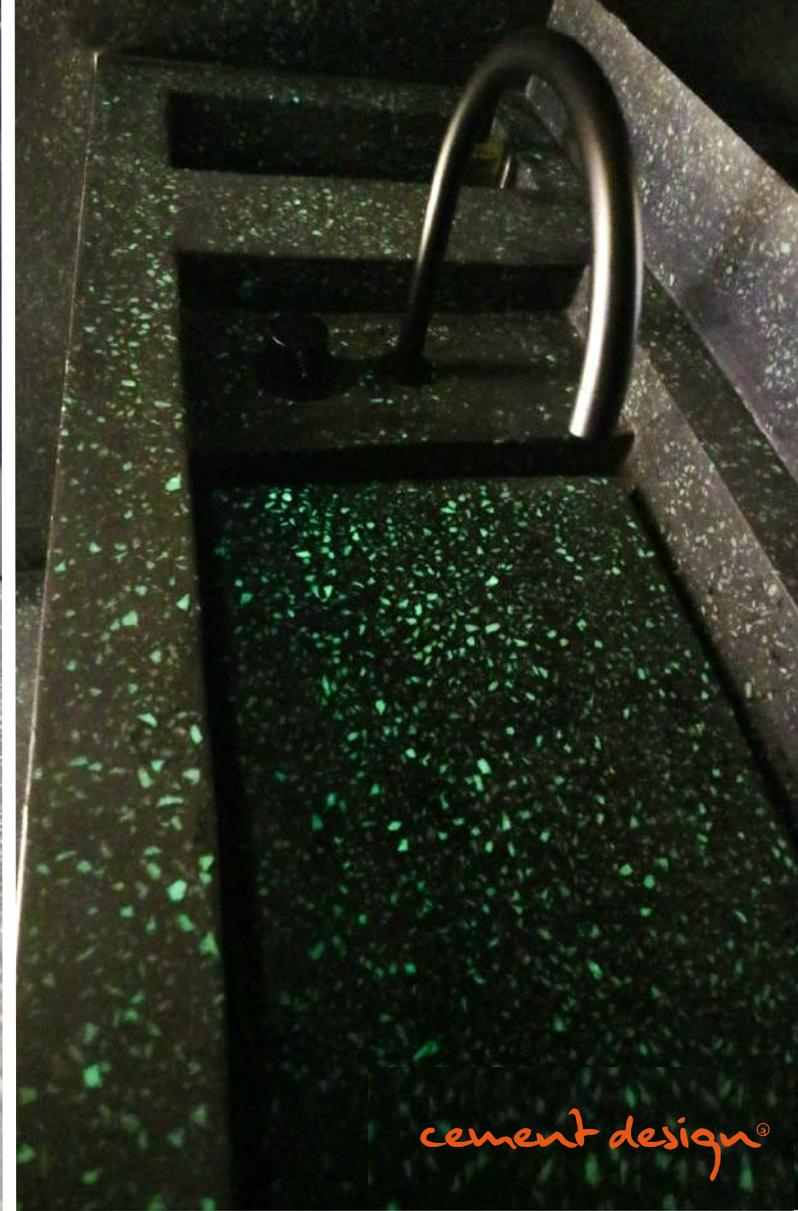

It is natural and comes in various colours and combinations. It can be used on floors, walls, bathrooms, sinks, furniture etc.
